

INJEKSJONSPUMPER

Produktnummer: .

WIWA INJECT GUARD

WIWA INJECT GUARD

Optimized workflows and full cost control

Optimized workflows and full cost control

- Suitable for injection device **WIWA INJECT 2K 230**
- Provides process reliability and cost optimization through control of consumption quantities and injection pressures
- For injections up to 400 bar

You can view the materials processed and the associated injection pressures at any time on your mobile device in the WLAN of the data logger. In addition, the system monitors the mixing ratio and warns of irregularities, e.g. due to empty containers. The control optionally signals when the maximum injection quantity or the maximum injection pressure per borehole has been reached. Operation on the 4" display directly on the control cabinet and with any terminal device with Wlan function and Internet browser. Pressure at the mixer, actual quantity packer and temperature (optional) are shown in the display and mobile terminal.

SCOPE OF DELIVERY:

Control cabinet with control and touch display, data logger (documents the specified parameters), flow cells up to 400 bar, pressure sensor.

DOCUMENTATION OF:

Total amount of material and pressure per packer

Time of injection per packer

Number of injections per packer

Total amount of material per day or site

Technical data

Model	Volume measurement kit on gel system (LM 230)
Order number	0669642
